

# NIS2 Compliance Service

NIS2 (Network & Information Security Directive 2) is an EU regulation which came in effect on 17 October 2024, designed to strengthen cybersecurity resilience across essential and important sectors.

Under NIS2, businesses are required to notify authorities within 24 hours of a security incident and follow strict protocols for transparency and response, to minimise the impact of such incidents. Failing to comply with regulation, businesses might face fines that are up to €10M or 2% of their global annual turnover and risks of temporary suspension of their services.

## Why choose Sharp IT Services for NIS2 Compliance?

Sharp IT Services supports clients throughout their compliance journey, from implementation to ongoing maintenance.

We assess your organisation's needs through a gap analysis, identifying areas that fall short of NIS2 requirements. Based on this, we develop a tailored roadmap to achieve compliance. Our cybersecurity experts continuously monitor and test your systems, ensuring ongoing compliance and readiness for audits.

## What are NIS2 core objectives?

### Strengthening cyber resilience

Ensuring organisations implement robust security measures to protect critical systems.

### Enhancing incident management

Mandating quick reporting and structured responses to cyber incidents.

### Unifying EU security standards

Reducing inconsistencies in cybersecurity policies across all EU member states.

### Securing supply chains & vendors

Addressing vulnerabilities in third-party providers to prevent security breaches.

### Encouraging employee awareness

Promoting continuous staff training to mitigate risks and enhance cyber hygiene.

### Improving regulatory compliance

Enforcing regular audits and compliance reporting to meet security standards.

## Who should comply?

NIS2 applies to medium and large enterprises (**50+ employees or €10M+ turnover**) in critical sectors, as well as non-EU businesses serving the EU. Covered industries include energy, banking, healthcare, digital infrastructure, postal services, waste management, manufacturing, research and others.

Suppliers and service providers must also meet cybersecurity standards. **Ensuring compliance across the supply chain is crucial to maintaining security, preventing disruptions, and avoiding penalties.**

## Is your business prepared for NIS2?

New regulations demand stronger security. Ensure compliance and protect your operations with expert support.
